# Western Estancia BLE Meeting Protocol

- Please put your name, community, and email address in the chat box.
- Please mute your line
- Type questions in the chat box
- Thank you for attending

# Agenda

- Introductions
- CTP & Risk MAP
- Base Level Engineering & eBFE Viewer
- Western Estancia Areas of Interest
- Resources

# What's a Cooperating Technical Partner (CTP)?

- The CTP Program was created in 1999 to help FEMA stretch limited mapping dollars and increase local involvement from sophisticated partners in the creation of FIRMs and DFIRMs.
- The CTP Program is an innovative approach to creating partnerships between FEMA and participating NFIP communities, regional agencies, state agencies, tribes and universities that have the interest and capability to become more active participants in the FEMA flood hazard mapping and Risk MAP programs.
- Earth Data Analysis Center, University of New Mexico, became New Mexico Cooperating Technical Partner in 2014

# CTP Partnerships

- New Mexico Department of Homeland Security and Emergency Management
  - *Loretta Hatch, New Mexico State Floodplain Coordinator*
    - [Loretta.Hatch@state.nm.us](mailto:Loretta.Hatch@state.nm.us)
    - (505) 476-0612
- Local Flood Control Authorities
- Local Communities

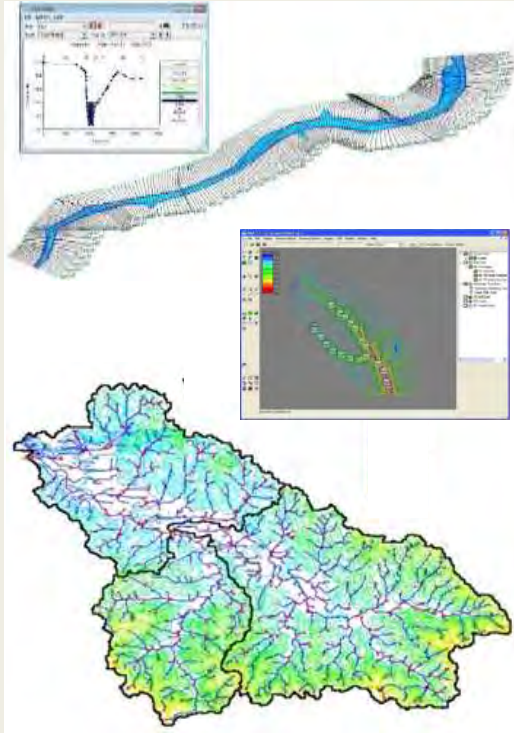

# What is Risk MAP?

- Mapping – Identification of areas of natural hazard risk
- Assessment – Review and analysis of hazard areas
- Planning – Mitigation activities to reduce risk

# Base Level Engineering is a programmatic evolutionary step which provides:

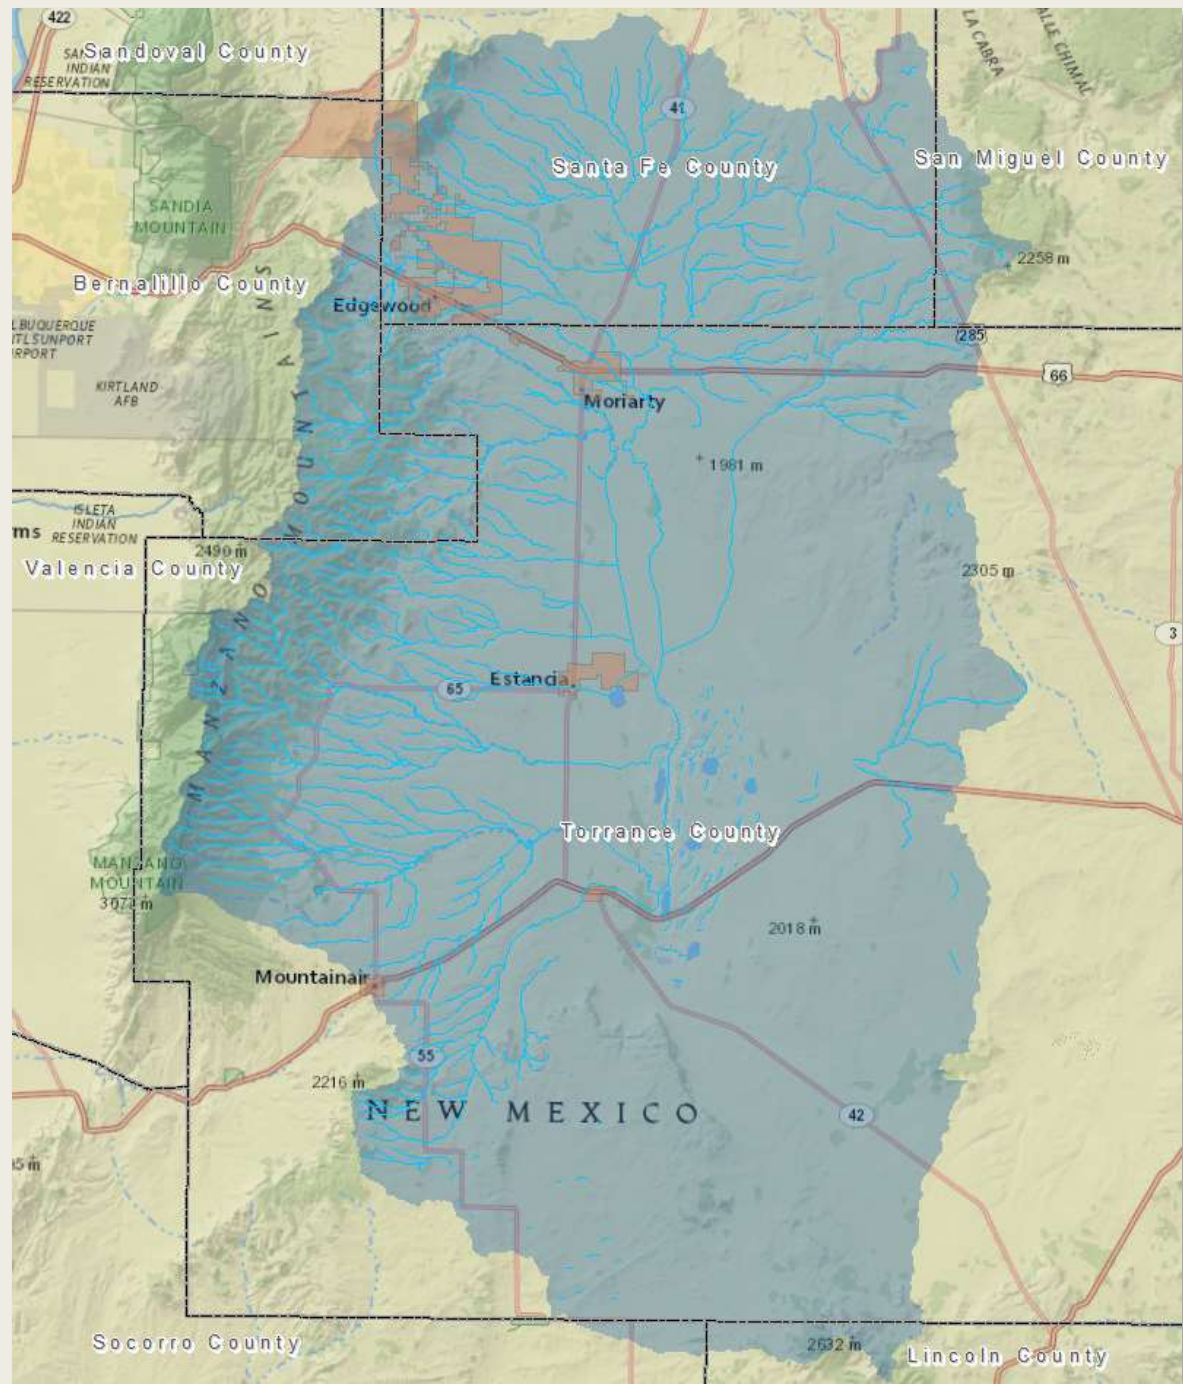

Credible engineering analysis and modeling for local communities and developers.

Estimation of flood extents, water surface elevations and flood depths

May be adopted as Best Available Information (BAI) by communities & inform development decisions.

# Approach

- FEMA has devised both a 1D and 2D modeling approach
- High Resolution Ground Data required
- Manual revisions to input cross-sections or grids during modeling
- Cross-sections added near structures
- Human Investigation of results prior to FIRM mapping

# Deliverables

- Hydraulic Engineering Models (10%, 4%, 2%, 1%, 1%+, 1%-, and 0.2%)
- Estimated Flood Extents (10%, 1% and 0.2%)
- Estimated Water Surface Grids (1% and 0.2%)
- Estimated Flood Depth Grids (1% and 0.2%)
- Optional Layers also possible (Hazus Run, Point file for update potential, freeboard grids)

# Creating Base Level Engineering Data

## Terrain Data Collection

Is ground elevation  
Information readily-  
Available, or must it be  
Collected?

## Hydrology

How much  
water are  
we talking  
about?

When will it  
get here?

## Hydraulics

How does it  
react in the  
stream?

## Floodplain Mapping

What areas  
are  
impacted?

# BLE Increases Collaboration & Transparency

## Current Mapping Challenges

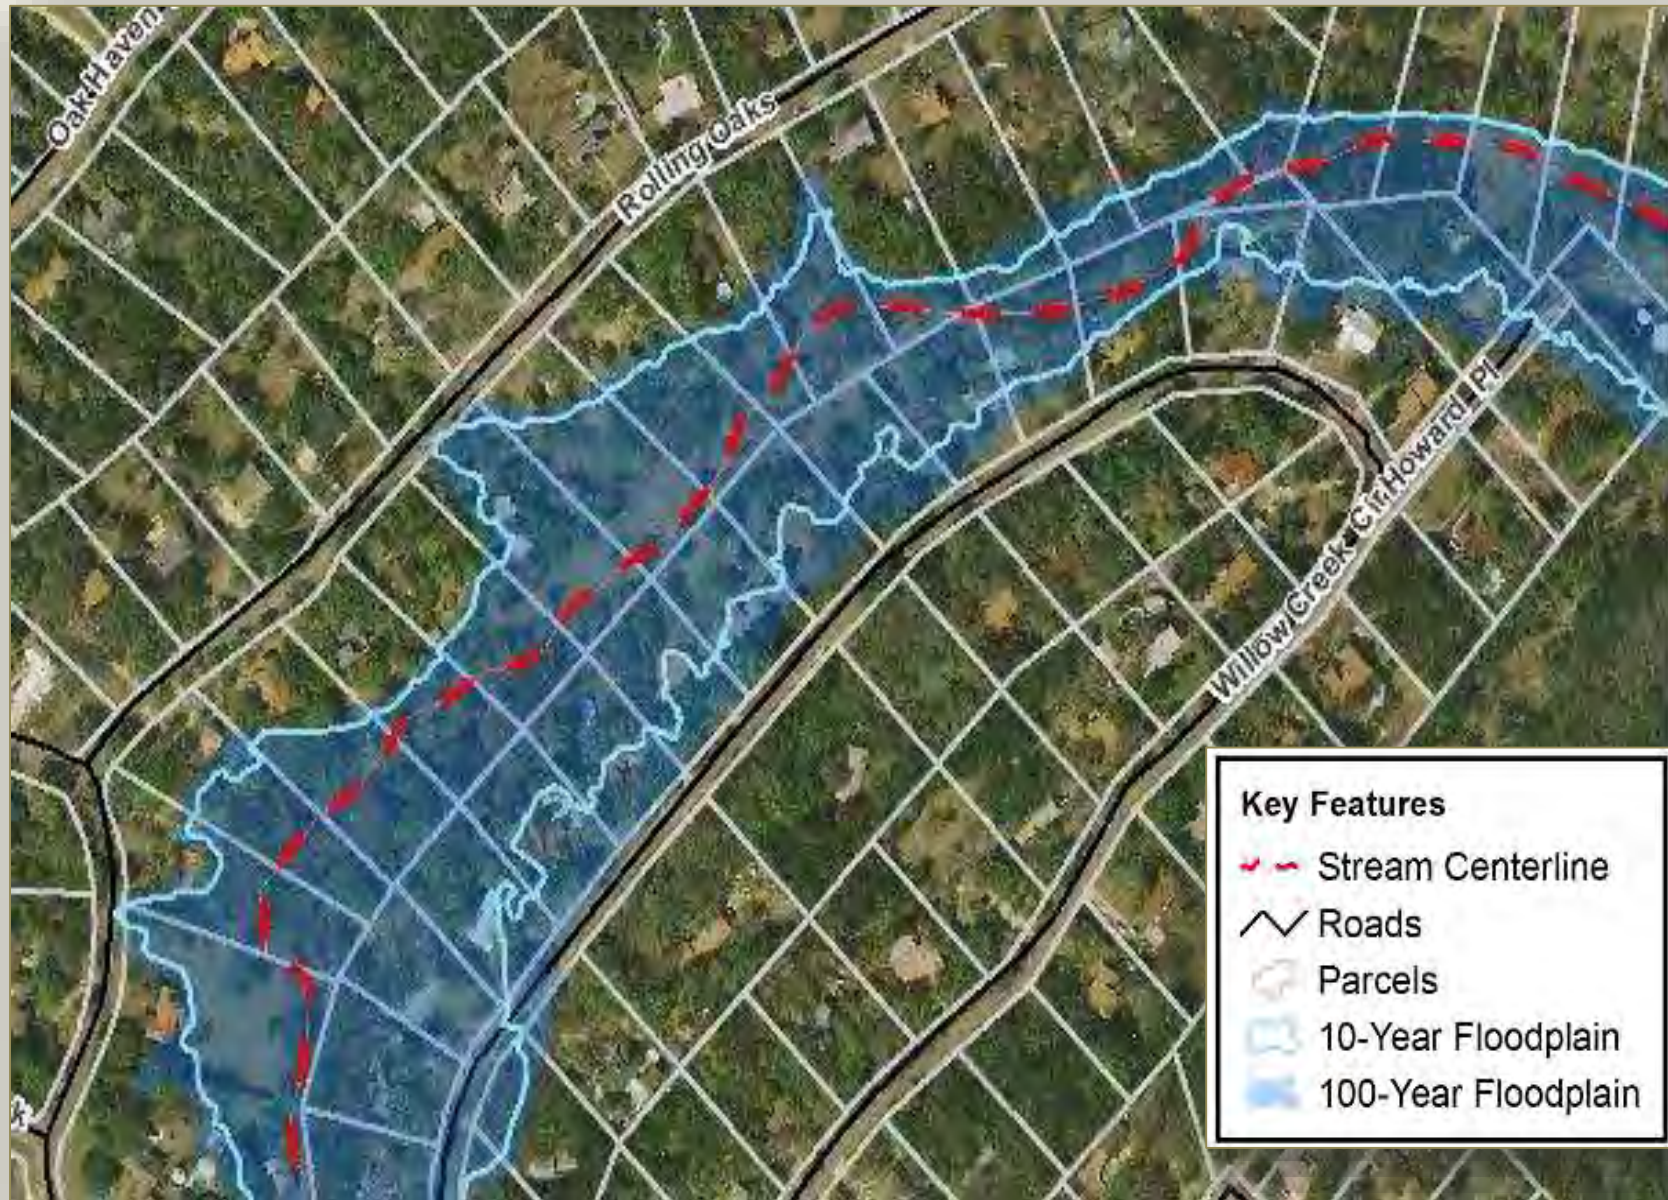

- FIRM updates take 3-5 years to update through regulatory process
- FIRMs include a subset of streams within a watershed based on current and historic updates
- FIRMs depict 1% and 0.2% annual chance events
- Insurance and In versus Out discussions
- Detailed study areas require significant resources to prepare a model communities can review

## Base Level Engineering Solutions

- BLE data can be produced and delivered to communities within 9-12 months
- BLE assessments performed at a watershed scale producing stream network of data
- Flexibility in how results are exhibited
- Discussions related to flood risks and development decisions
- Community may test drive and refine data prior to moving to a map update

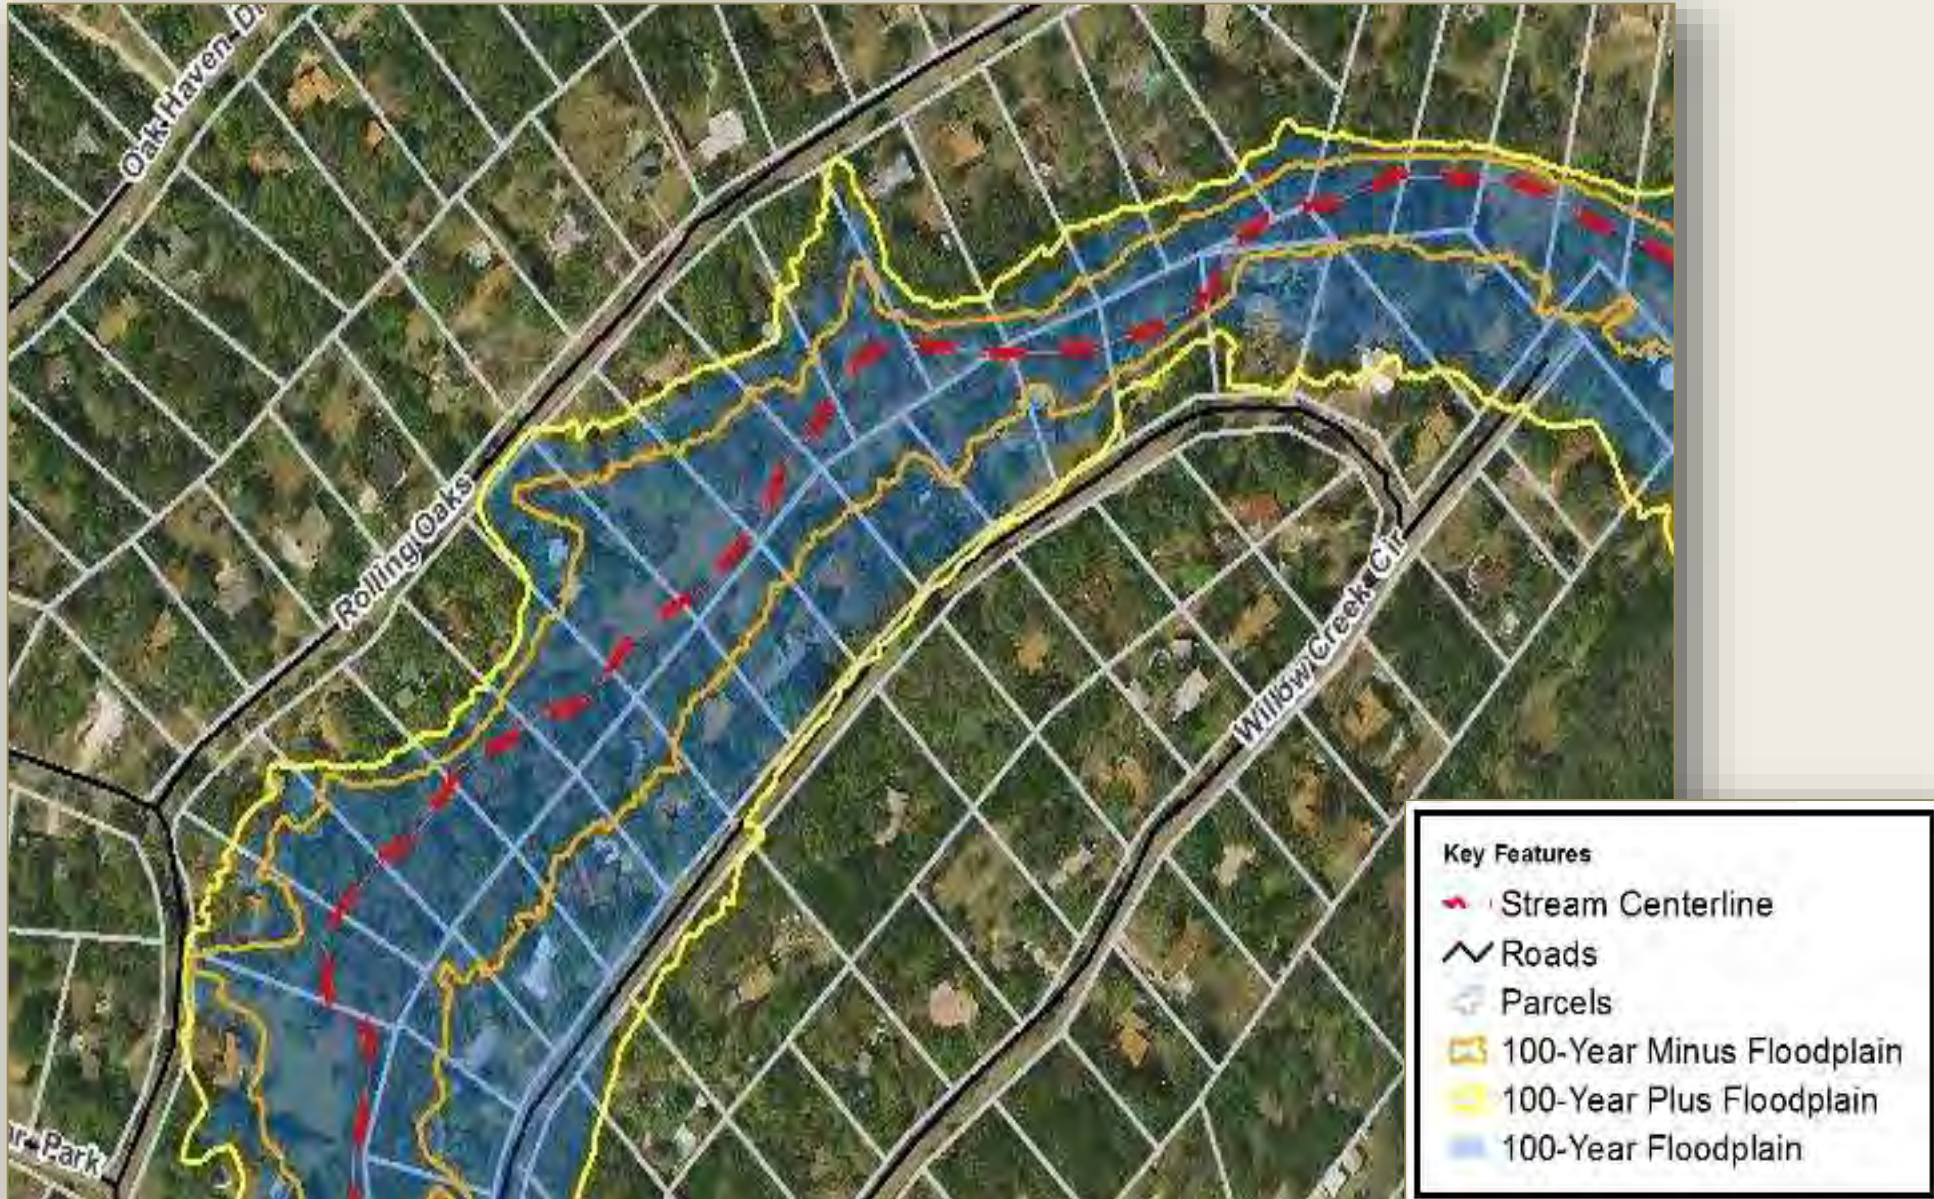

# Practical Uses for BLE Data

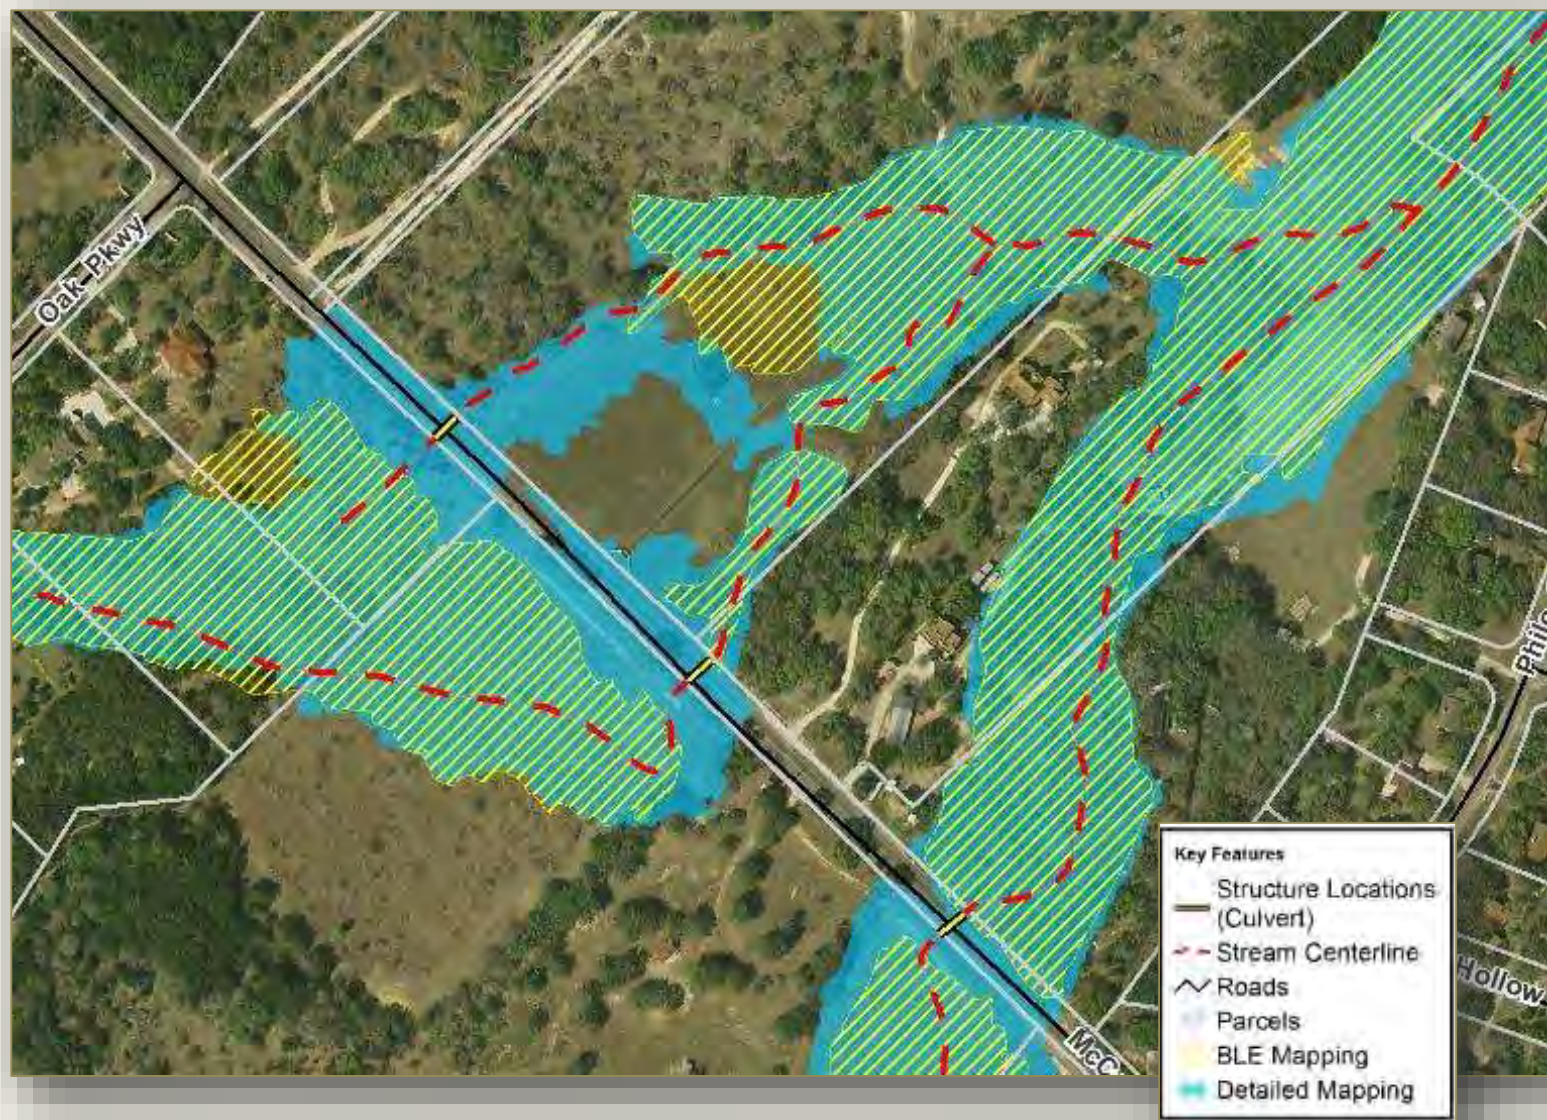

# Practical Uses for BLE Data

# Estimated Base Flood Elevation Viewer

## Estimated BFE Viewer Purpose:

- Provide engineering data in a format that allows immediate use by public.
- Federal, State and local officials to estimate a Base Flood Elevation consistently.

[www.InFRM.us/estBFE](http://www.InFRM.us/estBFE)

## ■ Public interaction with Results

## ■ Site Specific Reports

## ■ Data & Model Downloads

## ■ Consistent BFE Estimation

# Estimated Base Flood Elevation Viewer

*Welcome to the*

## Estimated Base Flood Elevation Viewer

Base Level Engineering assessments are produced using high resolution ground data to create technically creditable flood hazard information that may be used to expand and modernize FEMA's the current flood hazard inventory.

The Estimated Base Flood Elevation Viewer allows users to:

### View Base Level Engineering Data

Access all Base Level Engineering available without GIS software.

Click **LEGEND** tab to view an explanation of all data shown in the viewer.

Click **MAP VIEW** button to open or close a second viewing window, for side by side comparison.

Click **DATA LAYERS** to add or remove layers from the map.

### Download Dataset & Models

Our Data Download feature makes all of our Base Level Engineering data available to you for download.

Click **DATA LAYERS** and add the **DOWNLOADABLE DATA** layer. Once loaded, users can choose which datasets to save.

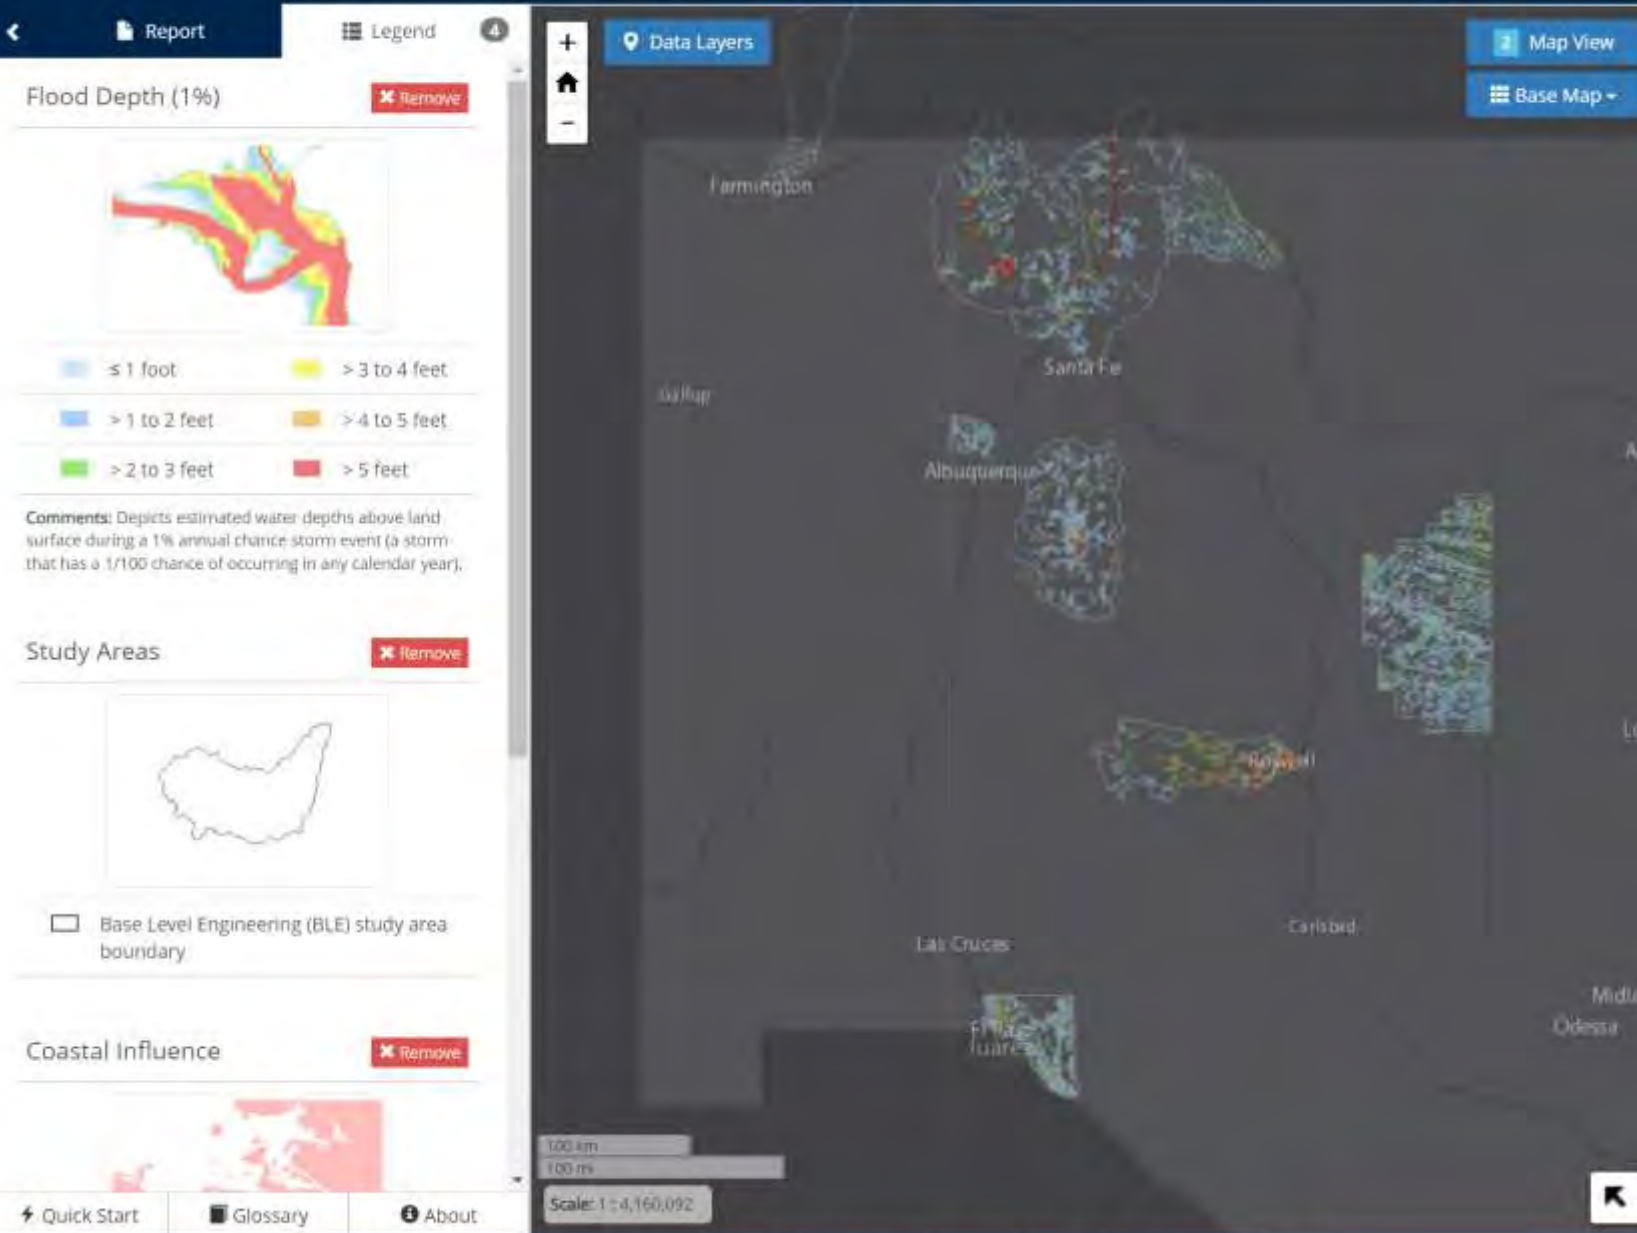

### Property Look Up

Where data is available, users can produce a property specific report with estimated Base Flood Elevation and Flood depth information.

Click **TOOLS** tab to create a property specific flood risk report with details in your vicinity.

# Estimated Base Flood Elevation (estBFE) Viewer

# Estimated Base Flood Elevation Viewer

1% and 0.2%  
Estimated Flood Extent

1%  
Estimated Flood Depth

# Estimated Base Flood Elevation Viewer

- Floodplains on the Left
- Depth Grid on the Right

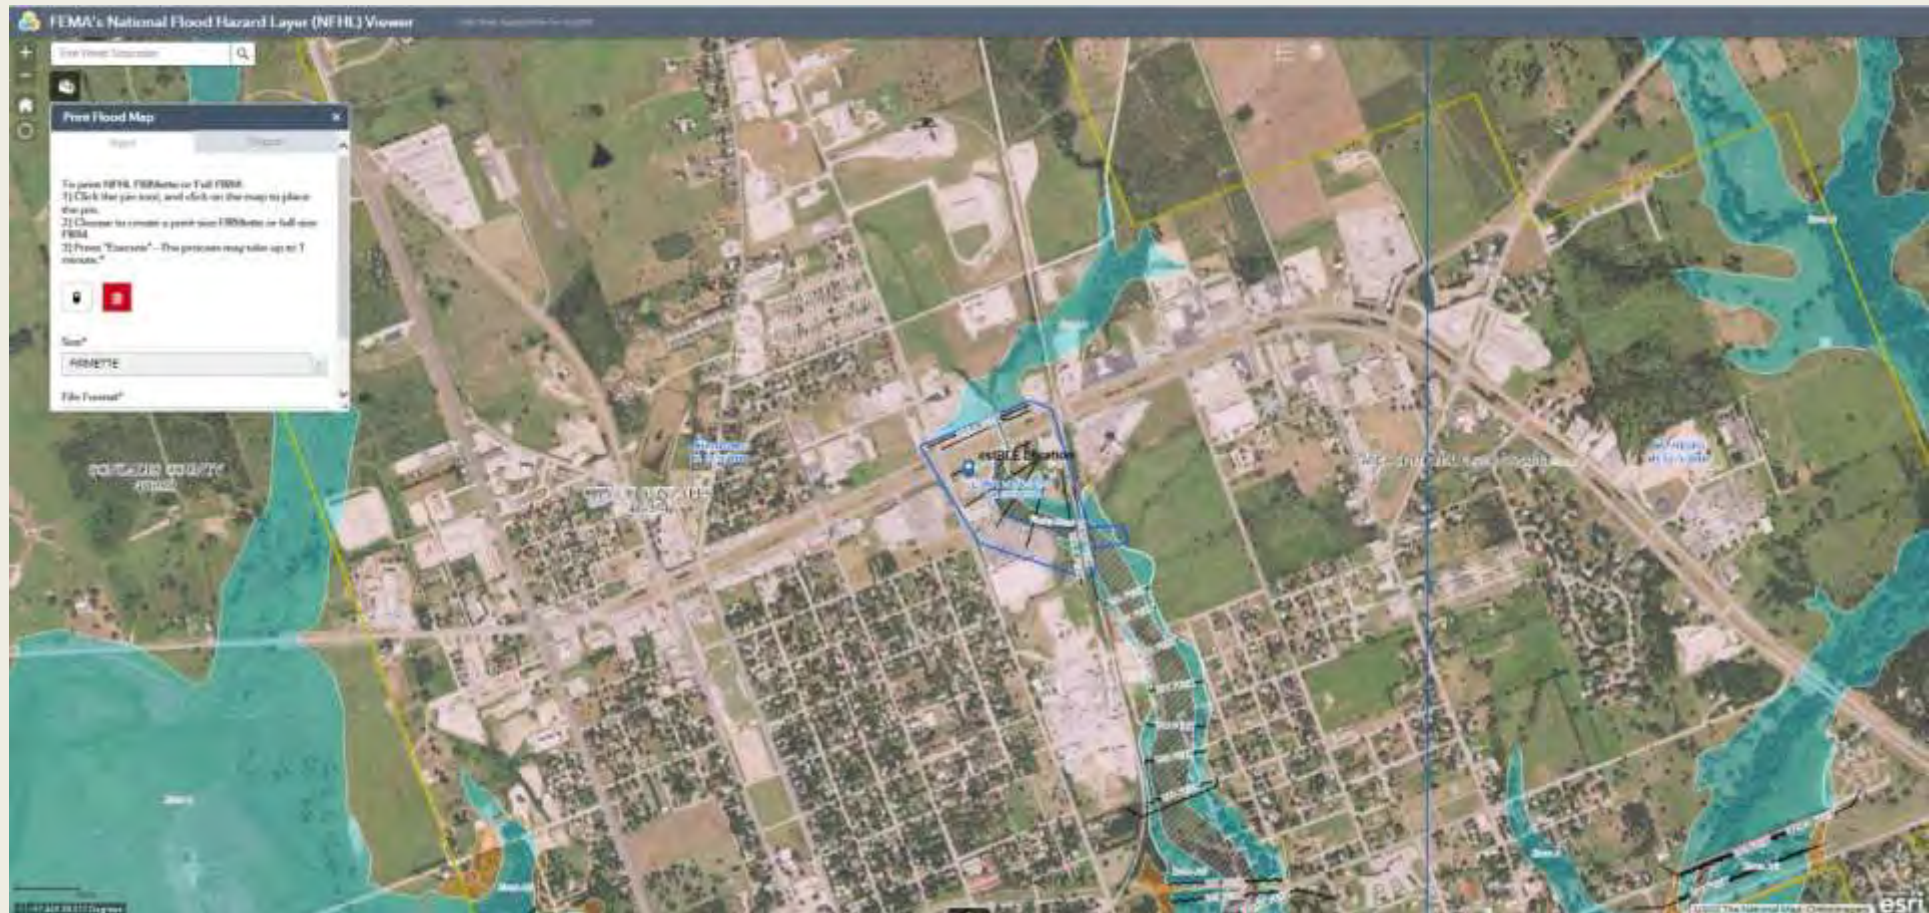

The web address of the report can be used to share or bookmark a specific location.

# Estimated Base Flood Elevation Viewer

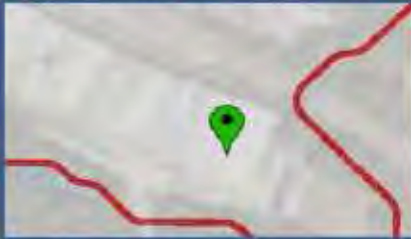

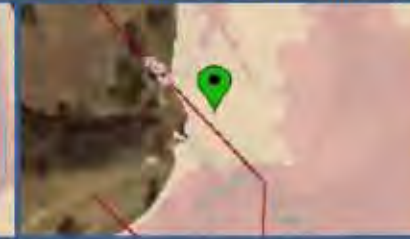

If detailed information is available on the current effective FIRM,  
The viewer will alert you and offer you the option to open the National Flood Hazard Layer (NFHL)

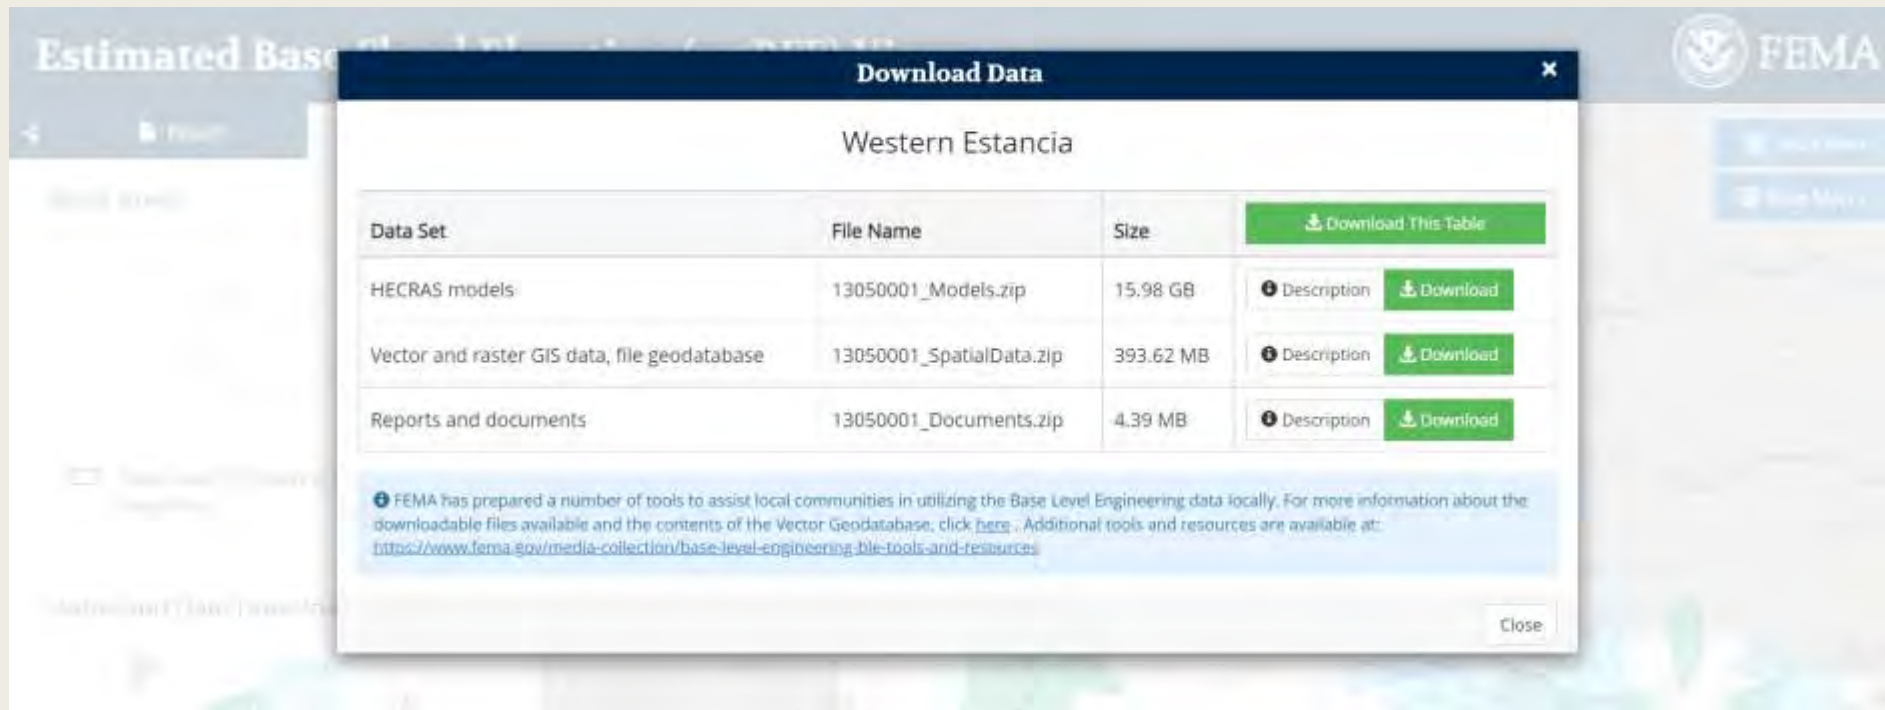

# Region 6 eBFE Viewer

There are four possible outcomes dependent upon where the **Drop Pin** is placed: Detailed Study Available, High Risk, Low to Moderate Risk and Low Risk. More information is available in Table below.

			
Detailed Study	High Flood Risk	Moderate Flood Risk	Low Flood Risk
<p><b>Flood Information For This Location</b></p> <p><a href="#">View Detailed Flood Report</a></p> <p>At the chosen location a more detailed study is available on the current effective FIRM panel, 48139CD19CF. Please review the current effective FIRM to identify the BFE your structure will be rated against.</p> <p><i>(Note: Currently the FEMA Map Service Center is unable to provide a BFE for your property area.)</i></p> <p><a href="#">Zoom to</a></p>	<p><b>Flood Information For This Location</b></p> <p><a href="#">View Detailed Flood Report</a></p> <p>At the chosen location (-96.839457,32.192638) the Estimated Base Flood Elevation is 447.4 ft (NAVD 88).</p> <p><i>(Note: A depth of 1.5 to 2.0 feet will increase the probability of the map location.)</i></p> <p><a href="#">Zoom to</a></p>	<p><b>Flood Information For This Location</b></p> <p><a href="#">View Detailed Flood Report</a></p> <p>At the chosen location (-96.841923,32.193003) the Estimated Base Flood Elevation is Not Applicable.</p> <p><i>(Note: A depth of 1.5 to 2.0 feet will increase the probability of the map location.)</i></p> <p><a href="#">Zoom to</a></p>	<p><b>Flood Information For This Location</b></p> <p><a href="#">View Detailed Flood Report</a></p> <p>At the chosen location (-96.824539,32.371995) the Estimated Base Flood Elevation is Not Applicable.</p> <p><i>(Note: A depth of 1.5 to 2.0 feet will increase the probability of the map location.)</i></p> <p><a href="#">Zoom to</a></p>

*Note: At this time, flood elevations are only available in the High Flood Risk flood extent area.*

# Download the Data

The screenshot shows a web application interface with a 'Download Data' modal window. The modal is titled 'Western Estancia' and contains a table with three data sets. Each row in the table has a 'Data Set' column, a 'File Name' column, a 'Size' column, and a 'Download' button. Additionally, there is a 'Description' link for each row. A 'Download This Table' button is located at the top right of the table. Below the table, there is a blue informational box with text about FEMA's tools and resources, and a 'Close' button at the bottom right of the modal.

Data Set	File Name	Size	Download
HECRAS models	13050001_Models.zip	15.98 GB	<a href="#">Description</a> <a href="#">Download</a>
Vector and raster GIS data, file geodatabase	13050001_SpatialData.zip	393.62 MB	<a href="#">Description</a> <a href="#">Download</a>
Reports and documents	13050001_Documents.zip	4.39 MB	<a href="#">Description</a> <a href="#">Download</a>

FEMA has prepared a number of tools to assist local communities in utilizing the Base Level Engineering data locally. For more information about the downloadable files available and the contents of the Vector Geodatabase, click [here](#). Additional tools and resources are available at: <https://www.fema.gov/media-collection/base-level-engineering-file-tools-and-resources>

[www.InFRM.us/estBFE](http://www.InFRM.us/estBFE)

# Download the Data

The screenshot shows an Excel spreadsheet with a table of datasets. The table has five columns: 'Download', 'FileName', 'FileSize', 'DataSet', and 'Description'. The 'Download' column contains three blue hyperlinks, each labeled 'Download'. A red rectangular box highlights the first three rows of the table, and a grey arrow points from the bottom of this box to the explanatory text below.

Download	FileName	FileSize	DataSet	Description
<a href="#">Download</a>	3050001_Documents.zip	4.39 MB	Reports and documents	A folder containing the Base Level Engineering report, and other documents.
<a href="#">Download</a>	3050001_Models.zip	15.98 GB	HECRAS models	A folder containing HECRAS models for streams. For very large models, the folder contains a file with links for downloading the model in incremental parts.
<a href="#">Download</a>	3050001_SpatialData.zip	393.62 MB	Vector and raster GIS data, file geodatabases	A file geodatabase containing raster data for 1% and .2% depths and water surface elevations, and vector data representing stream center lines, study areas, cross sections, flood hazard areas, and more.

Hyperlinks for each of the dataset available are included in the excel file. Excel file can be sent ahead of any meeting you are going to have in the watershed areas.

# TSDN Report

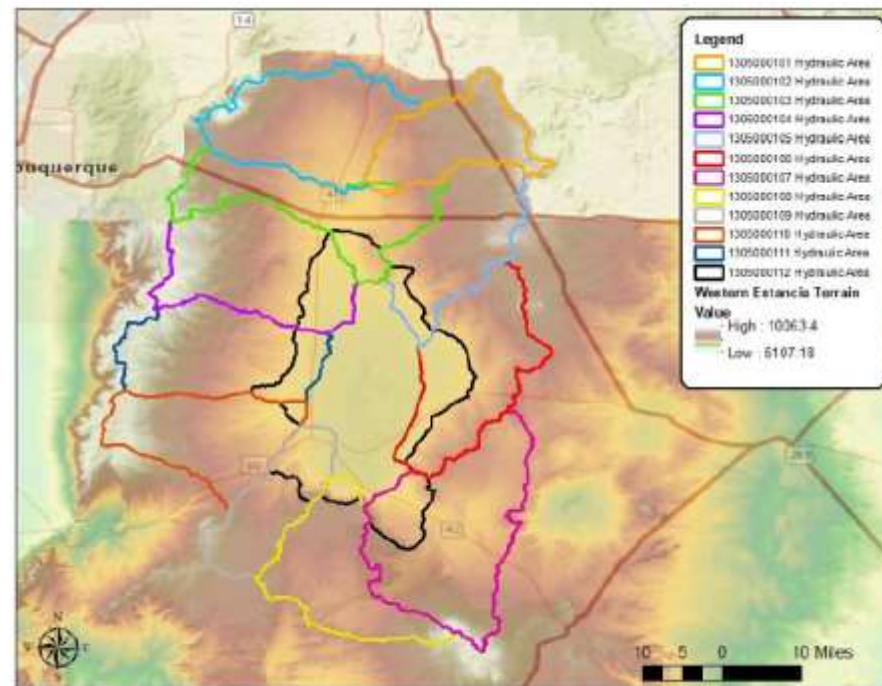

Figure 4: Extent of 2D hydraulic model areas by HUC-10

Figure 5: Cell face alignment at breaklines

# HAZUS ANALYSIS

A Hazus analysis was prepared using the 1- and 0.2-percent-annual-chance depth grids. Hazus version 4.2 was used to run the analysis. The Hazus output file (.hpr) has been exported and provided as part of this deliverable along with the census blocks used in the analysis.

Values under \$100,000 have been rounded to \$10,000 and all other values are rounded to \$100,000. Losses and replacement values are determined based on the census blocks that were associated with the study area and may not be all-encompassing of the listed county or community.

Table 12: Hazus Results Summary

Community	Total Replacement Value (\$)	1% Total Losses (\$)	0.2% Total Losses (\$)
Unincorporated Areas of Bernalillo County	\$800,900,000	\$400,000	\$500,000
Unincorporated Areas of Lincoln County	\$500,000	\$0	\$0
Unincorporated Areas of San Miguel County	\$2,200,000	\$0	\$0
Unincorporated Areas of Santa Fe County	\$851,500,000	\$2,000,000	\$3,600,000
Unincorporated Areas of Socorro County	\$500,000	\$0	\$0
Unincorporated Areas of Torrance County	\$1,209,700,000	\$15,600,000	\$24,400,000
Edgewood, Town of	\$503,800,000	\$200,000	\$500,000
Estancia, Town of	\$124,500,000	\$6,600,000	\$10,500,000
Moriarty, City of	\$213,800,000	\$400,000	\$1,100,000
Mountainair, Town of	\$118,800,000	\$0	\$0
Willard, Village of	\$25,500,000	\$300,000	\$700,000

# Products Support Local Decision Making

## Educate your Community and Make a Plan

- Public awareness campaigns
- Map and publicize potential inundation areas
- Training for local staff
- Community Emergency Response Teams
- Community preparedness exercises
- Evacuation signage

## Encourage Smart Land Use and Development Decisions

- Determine and enforce acceptable land uses in downstream areas
- Increase permeability and infiltration
- Maintain open space downstream
- Encourage stream and wetland restoration

## Enact Management Best Practices

- Develop a dam failure study and emergency action plan
- Manage stormwater regionally
- Implement an inspection, maintenance, and enforcement program to ensure structural integrity

## Conduct Mitigation Projects Downstream

- Acquisition
- Elevation
- Detention and/or drainage projects

## Strengthen Local Codes

- Local inspection and enforcement
- Enact higher floodplain management standards
- Require green infrastructure

# What can I do with BLE?

## BLE and Your Community Resolution Structure

Your community is structured in a way that dictates **HOW** and **WHEN** you can use Base Level Engineering information

■ For Example:

- *Storm County bylaws dictate that new flood hazard information can only be adopted when FEMA publishes it on a new FIRM.*
- *The Town of Seiche has an ordinance that requires public presentation of new data at a Town Council meeting and a vote on it's official usage.*
- *Hazard County requires an update to it's zoning overlay districts (which comes with it's own public review and community approval process) before any new flood hazard information can be used.*

# Base Level Engineering as Best Available Information

- Communities are required to reasonably utilize BFE information when available
  - 60.3(b)
- FEMA's Best Available Information Policy:
  - *FEMA Policy* #104-008-02
- BLE MAY be considered Best Available Information (BAI) and adopted by communities

**44 CFR 60.3(b)** When the Administrator has designated areas of special flood hazards (A zones) by the publication of a community's FHBM or FIRM, but has neither produced water surface elevation data nor identified a floodway or coastal high hazard area, the community shall:...

**(3)** Require that all new subdivision proposals and other proposed developments (including proposals for manufactured home parks and subdivisions) greater than 50 lots or 5 acres, whichever is the lesser, include within such proposals base flood elevation data;

**(4)** Obtain, review and reasonably utilize any base flood elevation and floodway data available from a Federal, State, or other source, including data developed pursuant to paragraph (b)(3) of this section, as criteria for requiring that new construction, substantial improvements, or other development in Zone A on the community's FHBM or FIRM meet the standards ...

# WESTERN ESTANCIA

BLE Areas of Interest

Mat Hornack, ESP & Associates

# Western Estancia Areas of Interest

## *Overall Modeling Approach*

- Western Estancia HUC-8 is a self-contained basin.
- 2D modeling approach used to capture the variety of flow paths within this basin.

# Western Estancia Areas of Interest

## *Overall Modeling Approach*

# Western Estancia Areas of Interest

## *BLE vs Effective Example*

- Area southwest of Moriarty
- Effective floodplain limits are inconsistent with terrain in this area.
- BLE Floodplains have greater detail than effective Zone A.

# Western Estancia Areas of Interest

## *BLE vs Effective Example*

# Western Estancia Areas of Interest

## *BLE vs Effective Example*

- Along US 285 near White Lakes
- Effective floodplain limits are not tied to an elevation.
- BLE Floodplains match modeled elevation for these lake areas.

# Western Estancia Areas of Interest

## *BLE vs Effective Example*

# Western Estancia Areas of Interest

## *Removed Mapping*

- 7.5 miles northwest of Stanley, NM
- Modeling showed disconnected flooding with depths around 0.5 feet and lower.

# Western Estancia Areas of Interest

## *Removed Mapping*

# Western Estancia Areas of Interest

## *BLE vs Effective Example*

- Near McIntosh, NM
- 2D modeling approach allows for seamless flow transfer between flooding sources.

# Western Estancia Areas of Interest

## *BLE vs Effective Example*

# Western Estancia Areas of Interest

## *Structures Example*

- West of McIntosh, NM
- Effective mapping ends for an unknown reason
- BLE mapping reflects impact of embankment but may overestimate flooding due to not explicitly modeling structures.
- BLE models are set up to simplify adding structures in the future.

# Western Estancia Areas of Interest

## *Structures Example*

# Western Estancia Areas of Interest

## *Structures Example*

- Southeast Edgewood
- Several structures and embankments here
- For 2D BLE, we permit flow across structures and sometimes have to force the mesh to allow flow through.

# Western Estancia Areas of Interest

## *Structures Example*

# Western Estancia Areas of Interest

## *Structures Example*

- Barton Road (Bernalillo and Santa Fe County Boundary)
- Survey or field investigation would help to understand structures and flow patterns here.
- This level of detail is outside of the scope of a BLE analysis.
- Flow depths are very shallow in this area.

# Western Estancia Areas of Interest

## *Structures Example*

# Western Estancia Areas of Interest

## *BLE vs Effective Example*

- Between Barton and Edgewood
- Without gages, no model calibration is possible
- In certain areas, especially closer to the headwaters of a basin, flooding is less than effective mapping.
- Further downstream, modeling is closer to effective mapping.

# Western Estancia Areas of Interest

## *BLE vs Effective Example*
